LIGHTING CONTROL FOR THE SMART BUILDING

## INTELLIGENT LIGHTING FOR A **GREENER** WORLD

### **ECS - An Addressable Lighting Control and Energy Management System**

- > **Reduces lighting energy costs by 50% to 75%**
- > **Dramatically reduces your facility's carbon footprint contributing to a more sustainable world**

Addressable fixture level dimming controls coupled with easy to use software allow ECS to respond dynamically to the ever changing characteristics of a building. ECS eliminates wasted energy from lighting while providing the right amount of light where and when required. Since 2002, ECS has been installed in more than 15,000,000 square feet of building space, in such applications as commercial offices, sports stadiums, warehouses, public buildings, hospitals, big box retail and parking garages. Our Clients span Canada, the United States and now Europe.
